Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. US20020147140A1

GENERAL INFORMATION:

APPLICANT: Rosen et al.

TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REFERENCE: PCOO5

CURRENT FILING DATE: 2001-01-17

Prior application data removed - refer to PALM or file wrapper

NUMBER OF SEQ ID NOS: 4031

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 3454

LENGTH: 8487

U.CF-ENN is a normalized cDNA library containing the following tissue(s): Primary Lung Cystic Fibrosis
Epithelial Cells. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an ollyo-dT primer containing a Not I site. Double stranded CDNA was ligated on EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The ollyonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dTy18 tail. The sequence tag for this library is CTGCTCAGGT.
                                                                                                                                                                                                   BM982877 11-MAR-2002 UI-CF-EN1 Homo sapiens cDNA clone UI-CF-EN1-acs-d-05-0-UI 3', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Total John Library of Iowa Med Labs, Iowa City, IA 52242, USA Tel: 319 356 4866

according to Bonaldo. Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGAMCCAAGA; eye anterior segment, AATGCCGCAT; optic nerve, CCATTAAGTG; retina, CGCGG; Retina Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

UI-E-EJ1 is a subtracted CDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-df primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I; and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tall. The sequence tags for this library are: fetal eyes, AGNATCAAGA; lens, CGATTAGCGA; eye anterior segment, AATGCCGCAT; optic nerve, CCATTAAGT; retina, CCGCG; Retina Foveal and Macular, GTCC; RPE and Chorold, ACCTAA. This library was created for the program, Gene Discovery in the Visual mach return in the Visual mach in the interpretation is the interpretation in the visual mach in the visual mach in the visual mach in the visual mach interpretation is a contained by National Eye Institute (NEI).

                                                                                                                                                                                                     9
                                                             The present sequence is a DNA encoding tumour suppressor homologue protein, p331NG2 which is homologous to human tumour suppressor protein, p471NG3. The tumour suppressors of the invention are involved in the regulation of cell proliferation and in the control of cellular aging, anchorage dependence and apoptosis. The tumour suppressor protein, p471NG3, nucleic acids encoding it and antibodies against it are useful for diagnosis, prevention and treatment of tumours and cancers. The p471NG3 DNA is also used in gene therapy.
                       New tumor suppressor protein p471NG3 for the diagnosis and treatment of

The present invention also describes the human gene TSC403 expressed specifically in normal lung tissue. TSC403 is useful in the diagnosis, investigation and treatment of cancers in which it is overexpressed, including cancer of the lung, breast, fallopian tube, oesophagus, colon, thyroid, parotid gland, bladder, ovary or pancreas. INGIL is useful in the investigation of cell proliferation, aging and apoptosis and the pathology of cancer, the diagnosis and treatment of cancer such as cancer of the colon, stomach, oesophagus or fallopian

TUSOP sequence was identified from a human lung cDNA library. The protein is 240 amino acids in length and has one potential CAMP and CGMP dependent protein kinase phosphorylation site, nine potential protein kinase c phosphorylation site, five potential casein kinase phosphorylation sites, five potential casein kinase phosphorylation sites, five potential casein kinase phosphorylation sites, five potential tyrosine kinase phosphorylation sites, and one potential tyrosine kinase phosphorylation site. Tusor has structural and chemical similarity to p33. Tusopp can be used to treat or prevent cancer, particularly of the reproductive or gastrointestinal tracts or of the immune system. Agonists of the Tusop protein can be used to raise Tusop specific antibodies and to screen for specific binding agents and potential therapeutic agents. The Tusop diagnostic probes and primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 270
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 359
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      330
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        390

No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because, they are often obtained from oligo-dT primed cONA libraries. Such ESTs are not well suited for isolating cDNA sequences

derived from the 5' ends of mRNAs and even in those cases where longer both Sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.

            suppressor protein (TGSUP) see AAY52199. The TGSUP protein is 240 mino acids in length and has one potential CAMP and CGMP dependent protein kinase phosphorylation site, nine potential protein kinase phosphorylation site, five potential casein kinase phosphorylation site, five potential casein kinase phosphorylation site, site, and one potential tyrosine kinase phosphorylation site. TGSUP has structural and chemical similarity to pi3: TGSUP can be used to treat or prevent cancer, particularly of the reproductive or gastrointestinal used to raise TUSUP specific antibodies and to screen for specific binding agents and potential therapeutic agents. The TUSUP nucleotide sequence can be used in gene therapy and as a source of diagnostic probes
                                                                                                                                                                                                                                                                                                       ö
